Professional Summary

Senior Full-Stack Engineer and frontend architecture lead with 9+ years of experience building scalable web platforms using React, Next.js, TypeScript, and Node.js. Proven track record designing high-performance systems for large-scale e-commerce and SaaS platforms used by millions of users. Founder and technical architect of a multi-vendor marketplace platform, specializing in complex role-based systems, scalable product ingestion pipelines, and modern cloud deployment practices.

Technical Skills

Frontend: React, Next.js, TypeScript, Vue, Tailwind CSS, Redux, React Native

Backend: Node.js, Express, PostgreSQL, MongoDB, MySQL

DevOps & Tools: Docker, Kubernetes, Vercel, Git, CI/CD

Testing: Jest, Playwright

Architecture: REST APIs, OAuth2, JWT authentication, PWAs, role-based access control

Professional Experience

Lead Frontend Engineer (Platform Architecture)

Chatterworks — Remote | 2025–Present

- Lead frontend architecture across the platform, defining scalable UI patterns and system boundaries across billing, authentication, and subscription flows.
 - Led end-to-end Stripe integration, implementing subscription lifecycle management, webhook-driven state sync, and secure payment flows across billing systems.
 - Refactored legacy monolithic billing pages into modular, state-driven components, improving maintainability and development velocity.
 - Architected canonical routing and state resolution across subscription upgrade and downgrade flows.
 - Partner directly with the founder on system design, product roadmap planning, and platform architecture decisions.
 - Established frontend engineering standards focused on performance, maintainability, and long-term platform scalability.
-

Senior Full Stack Engineer

Carter's / OshKosh B'gosh — Remote | 2024–2025

- Developed scalable e-commerce architecture using React, Next.js, and TypeScript for a global retail platform serving millions of customers.
 - Implemented server-side rendering (SSR) and static site generation (SSG) to improve page performance and search engine visibility.
 - Built reusable UI component systems, improving development efficiency and consistency across storefront experiences.
 - Integrated frontend systems with Salesforce Commerce Cloud APIs to support dynamic product data and personalization.
 - Collaborated with cross-functional teams including backend engineers, designers, and marketing stakeholders.
-

Senior Full Stack Engineer

Cox Communications — Remote | 2021–2024

- Built and maintained an internal troubleshooting platform using the MERN stack (MongoDB, Express, React, Node.js) with TypeScript.
- Delivered mission-critical tools used by emergency service teams, including EMS, fire departments, and law enforcement.
- Led cross-functional Agile teams delivering high-priority features across multiple environments.
- Implemented automated testing pipelines using Jest and Playwright, reducing production issues by 30%.

- Designed complex device management workflows supporting customer premises equipment (CPE) across large network environments.
-

Full Stack Engineer

Southwest Education — Remote | 2018–2021

- Modernized the company's legacy website into a full MERN stack platform improving engagement by 40%.
 - Built internal team management tools that centralized operational data and streamlined communication workflows.
 - Developed K-12 assessment systems with real-time progress tracking and analytics dashboards.
 - Integrated multiple REST APIs to synchronize frontend and backend systems.
-

Software Developer Intern

Winter Haven Capital LLC — Austin, TX | 2017–2018

- Developed a MERN-based trading analytics platform used to support investment decision workflows.
 - Optimized application performance reducing load times by 25%.
 - Implemented secure authentication systems using JWT tokens.
-

Startup & Founder Experience

Founder & Technical Lead — Hydra (B2B Marketplace Platform)

Technologies: React, Next.js, TypeScript, Node.js, PostgreSQL, Prisma, Tailwind, Vercel, Stripe

- Founded and architected a multi-vendor procurement platform for hospitality vendors and buyers.
- Designed scalable product ingestion pipelines enabling vendors to upload and manage thousands of SKUs while enforcing a standardized taxonomy.
- Built role-based dashboards supporting Admin, Vendor, Client, Agent, and Driver workflows.
- Implemented vendor onboarding flows with approval pipelines, ensuring operational readiness and data quality.

- Designed system architecture including authentication, database schema, CI/CD pipelines, and cloud deployment.
- Integrated payment infrastructure to support marketplace transactions and platform monetization.
- Led full lifecycle development: concept → architecture → implementation → deployment.
