SUMMARY

Full-stack engineer with over five years of professional experience building production MERN systems with MongoDB at the data layer — from mission-critical internal tooling at Cox Communications used by EMS, fire, and law enforcement teams, to K-12 assessment platforms. Experienced designing MongoDB document models and collections, integrating them through Node.js / TypeScript services, and shaping queries and aggregations that power real-time reporting. Professional working proficiency in Italian (B2). Comfortable owning the data layer end-to-end and turning ambiguous requirements into reliable, well-modeled systems.

EXPERIENCE

Lead Frontend Architect and Developer · Chatterworks (pre-Series A SaaS) **Jan 2026 – Present**

Remote

- Lead frontend and platform architecture, partnering directly with the founder on system design, roadmap, and platform decisions.
- Owned end-to-end Stripe integration: subscription lifecycle, webhook-driven state sync, and secure payment flows across billing surfaces.
- Refactored a monolithic billing UI into modular, state-driven components, unblocking parallel feature work and reducing time-to-ship on billing changes.
- Established frontend engineering standards — TypeScript conventions, component patterns, and testing posture — for long-term platform scalability.

Senior Full-Stack Engineer · Carter's / OshKosh B'gosh (placed via ImagineX) **2024 – Sep 2025**

Remote

- Shipped storefront features on a global e-commerce platform serving millions of customers across the Carter's and OshKosh B'gosh brands.
- Implemented SSR and SSG patterns in Next.js to improve page performance and search visibility on category and product-detail pages.
- Integrated the frontend with Salesforce Commerce Cloud APIs to power dynamic product data and personalized merchandising surfaces, and built reusable UI component systems adopted across storefront teams.

Senior Full-Stack Engineer · Cox Communications (placed via ImagineX) **2021 – 2024**

Remote

- Built and maintained an internal troubleshooting platform on a MongoDB-backed MERN stack (TypeScript), used by emergency-service teams — EMS, fire, and law enforcement — where downtime had operational consequences.
- Designed MongoDB document models and collections for device, customer, and equipment data, and built the Node.js service layer that read and wrote them.
- Designed device-management workflows for customer premises equipment (CPE) across large network environments.
- Implemented automated testing pipelines using Jest and Playwright, reducing production issues by ~30%; led cross-functional Agile delivery under strict release controls.

Full-Stack Engineer · Southwest Education **2020 – 2021**

Remote

- Modernized a legacy marketing site into a full MongoDB / MERN platform, lifting engagement ~40%.
- Built K-12 assessment systems with real-time progress tracking and analytics dashboards for educators, backed by MongoDB collections and aggregation queries for reporting.
- Built internal team-management tooling that centralized operational data and streamlined cross-team communication.

TECHNICAL SKILLS

Databases	MongoDB (document modeling, Mongoose, queries & aggregation), PostgreSQL, Prisma, SQL

Backend	Node.js, Express, REST APIs, OAuth2, JWT, role-based access control
Frontend	React, Next.js, TypeScript, Redux, Tailwind CSS, React Native, SSR / SSG
Platform	Docker, Kubernetes, Vercel, CI/CD, Git
Quality	Jest, Playwright, TypeScript-first testing patterns
Payments	Stripe (subscriptions, webhooks, billing flows)
Languages	Italian (B2 — professional working proficiency), English (native)

EDUCATION

Full-Stack Software Bootcamp Certificate · University of Texas at Austin
