SUMMARY

Frontend architect with 9+ years building production systems at scale — from the Carter's / OshKosh storefront serving millions of customers, to mission-critical MERN tooling at Cox Communications used by EMS, fire, and law enforcement teams. Most recently founded and architected Hydra, a B2B multi-vendor marketplace for the Italian hospitality sector, end-to-end. Currently leading platform architecture at Chatterworks (pre-Series A). Specialize in React / Next.js / TypeScript, complex role-based systems, and turning ambiguous product surface area into shippable architecture.

EXPERIENCE

Lead Frontend Engineer, Platform Architecture · Chatterworks (pre-Series A SaaS) *Sep 2025 – Present*
Remote

- Lead frontend architecture across the platform, partnering directly with the founder on system design, roadmap, and platform decisions.
- Owned end-to-end Stripe integration: subscription lifecycle, webhook-driven state sync, and secure payment flows across billing surfaces.
- Refactored a monolithic billing UI into modular, state-driven components, unblocking parallel feature work and reducing time-to-ship on billing changes.
- Architected canonical routing and state resolution across subscription upgrade / downgrade flows, eliminating an entire class of edge-case bugs.
- Established frontend engineering standards (TypeScript conventions, component patterns, testing posture) for long-term platform scalability.

Founding Engineer & Technical Architect · Hydra — B2B Hospitality Marketplace *Sep 2025 – Apr 2026*
Italy / Remote

- Co-founded and architected a multi-vendor procurement platform for the Italian hospitality industry, taking the product from concept to production deployment.
- Designed and built scalable product ingestion pipelines enabling vendors to onboard and manage SKUs at scale under a standardized taxonomy.
- Built role-based dashboards supporting five distinct user types — Admin, Vendor, Client, Agent, Driver — each with isolated permissions and workflows.
- Owned full stack: Next.js / TypeScript frontend, Node.js APIs, PostgreSQL via Prisma, Stripe payments, and Vercel deployment.
- Built vendor onboarding with approval pipelines, enforcing data quality and operational readiness before vendors went live on the marketplace.
- Live: hydra-multiservice.com

Senior Full-Stack Engineer · Carter's / OshKosh B'gosh *2024 – Sep 2025*
Remote

- Shipped storefront features on a global e-commerce platform serving millions of customers across Carter's and OshKosh B'gosh brands.
- Implemented SSR and SSG patterns in Next.js to improve page performance and search visibility on category and product detail pages.
- Built reusable UI component systems adopted across storefront teams, tightening visual consistency and accelerating feature development.
- Integrated frontend with Salesforce Commerce Cloud APIs to power dynamic product data and personalized merchandising surfaces.

- Partnered with backend engineers, designers, and marketing on cross-functional launches under retail-grade reliability constraints.

Senior Full-Stack Engineer · Cox Communications

2021 – 2024

Remote

- Built and maintained an internal troubleshooting platform on the MERN stack (TypeScript) used by emergency service teams — EMS, fire, and law enforcement — where downtime had operational consequences.
- Led cross-functional Agile teams delivering high-priority features across multiple environments under strict release controls.
- Implemented automated testing pipelines using Jest and Playwright, reducing production issues by ~30%.
- Designed device management workflows for customer premises equipment (CPE) across large network environments.

Full-Stack Engineer · Southwest Education

2018 – 2021

Remote

- Modernized a legacy marketing site into a full MERN platform, lifting engagement ~40%.
- Built K-12 assessment systems with real-time progress tracking and analytics dashboards for educators.
- Built internal team-management tooling that centralized operational data and streamlined cross-team communication.

Software Developer Intern · Winter Haven Capital

2017 – 2018

Austin, TX

- Built a MERN-based trading analytics platform supporting investment decision workflows; cut load times ~25% via targeted performance work.

TECHNICAL SKILLS

Frontend	React, Next.js, TypeScript, Redux, Tailwind CSS, React Native
Backend	Node.js, Express, PostgreSQL, Prisma, MongoDB
Platform	Docker, Kubernetes, Vercel, CI/CD, Git
Quality	Jest, Playwright, TypeScript-first testing patterns
Architecture	REST, OAuth2, JWT, role-based access control, SSR / SSG
Payments	Stripe (subscriptions, webhooks, billing flows)

EDUCATION

Full-Stack Software Bootcamp Certificate · University of Texas at Austin
